

CLINICAL AESTHETICS ADDITIONAL HANDS-ON TRAINING: HA DERMAL FILLERS

Designed for the novice injector who has completed an introductory HA Dermal Fillers training course (prerequisite) and seeks additional training with mentorship

The course includes a review of anatomy and physiology, FDA approved brands, treatment indication and contraindications, and guidelines for safe, evidence-based practices for treatment with HA Dermal Fillers. Participants will attend the training at Boston College's Chestnut Hill campus to learn in a small group setting and practice on live models. Mentorship by experienced, clinical aesthetic practitioners supports improved skills development and increased injector confidence.

This course includes:

- Dedicated "treatment area," separate from first-time learners
- Management of client visits from start to finish
- Treatment planning, injection practice, observation, and outcomes debrief

Eligible participants:

- APRNs
- RNs
- BSN students with clinical experience
- PAs
- MDs
- DOs
- DDSs
- DMDs

At the conclusion of this program, participants will be able to describe:

- Appropriate screening and selection criteria
- Safe mapping, doing and injection patterns with anatomical accuracy
- Essential client education and post-treatment client instructions, including potential adverse events, and need for follow-up appointments

We highly recommend students invite their own models (3 models per 3-hour session). All models should send an email to models@lexrx.co (NOT .com) to register and be assigned an appointment time for treatment.

To successfully complete this program and receive Contact Hours, participants must register for the program, participate in the program and submit a completed evaluation.
