(+/-)-Magellanine (7)

- Alkaloid isolated from the club moss, *Lycopodium Magellanicum*
- Tetracyclic angular carbon framework
- Six contiguous stereogenic centers
- Application of Gold-catalyzed DDA reaction

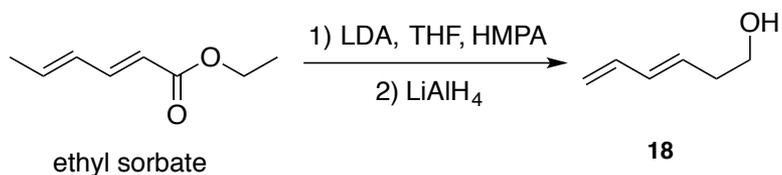

Retrosynthetic Analysis

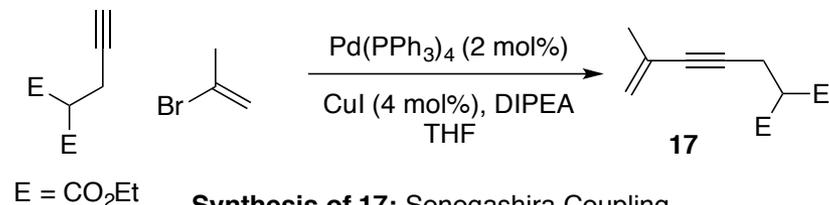

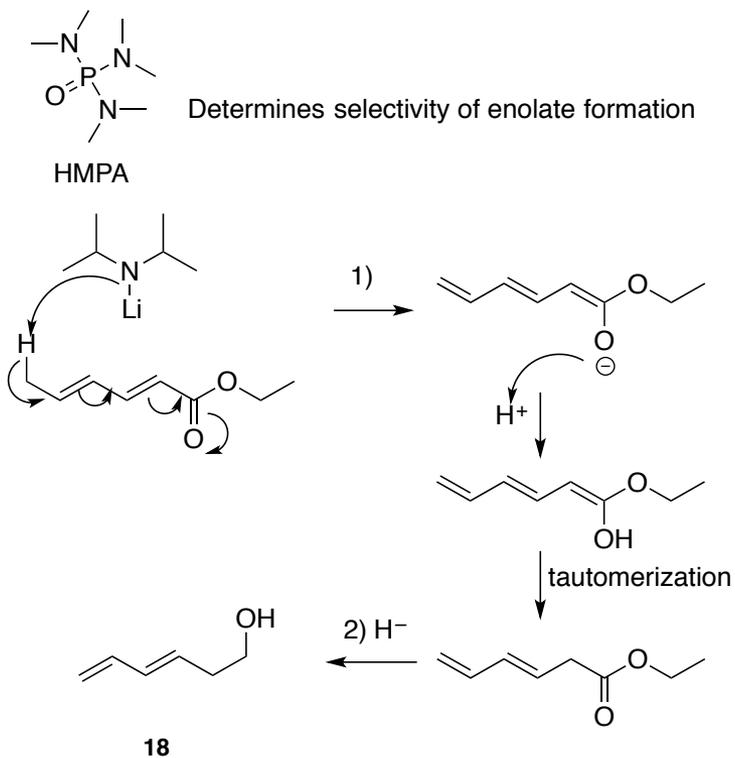

Forward Synthesis Overview

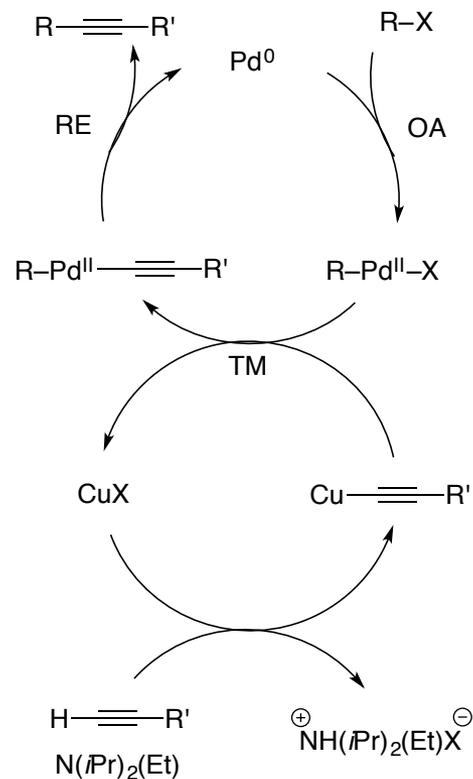

Forward Synthesis Mechanisms

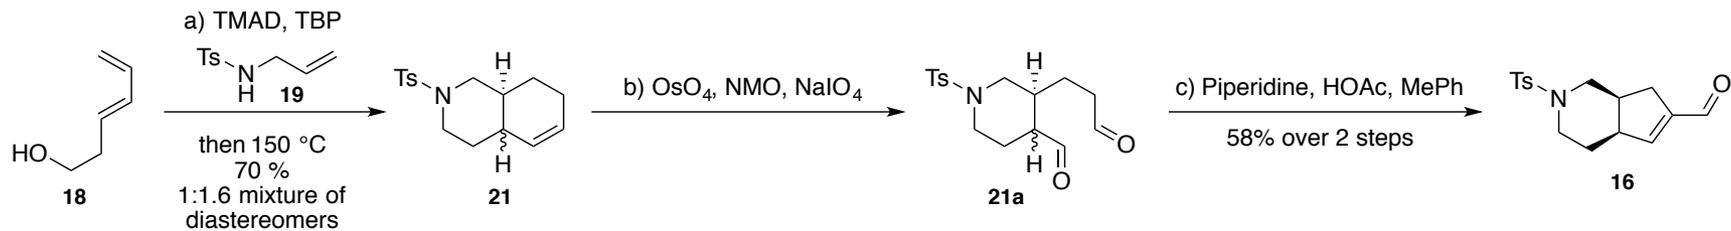

Synthesis of 18: Isomerization/Reduction

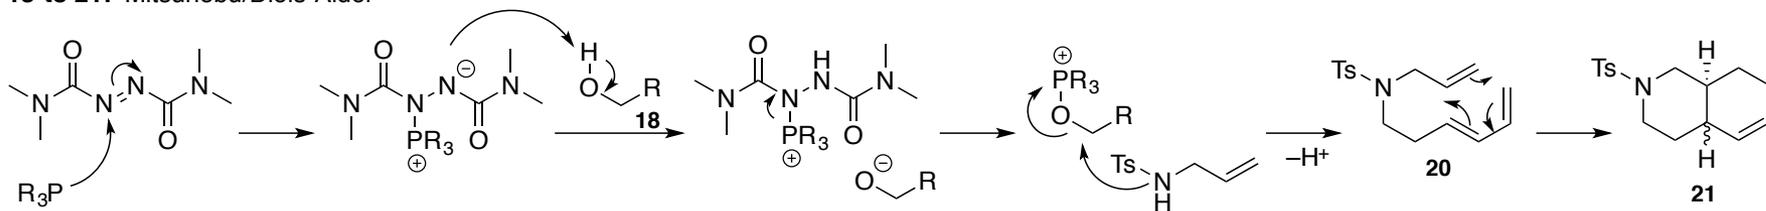

Synthesis of 17: Sonogashira Coupling

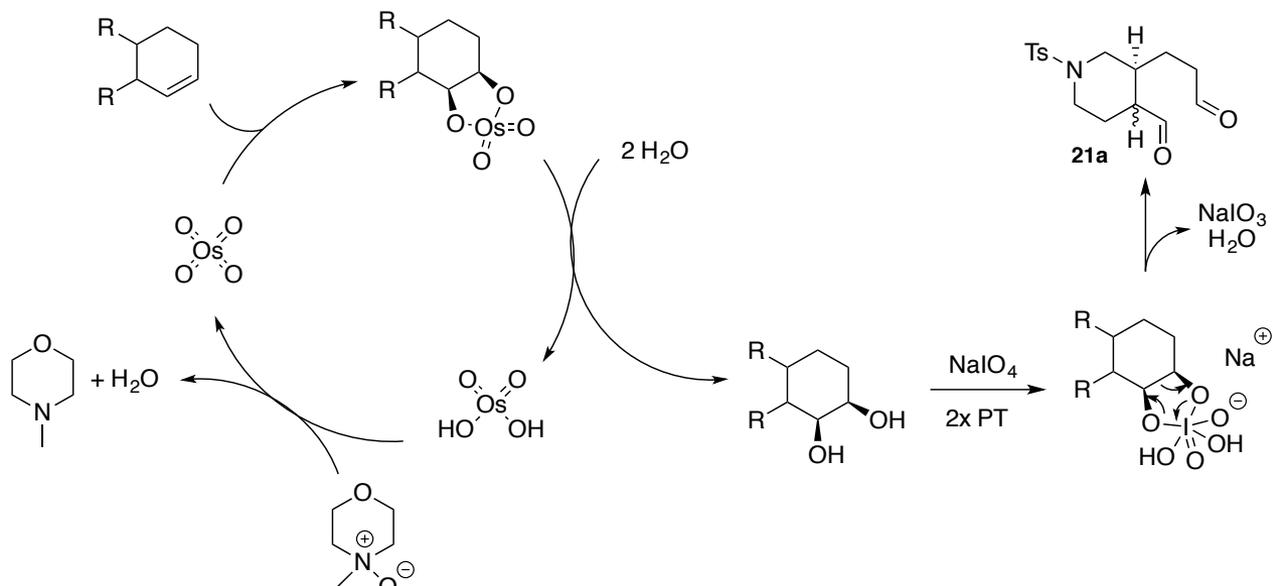

TMAD: Tetramethylazodicarboxamide
TBP: Tributylphosphine

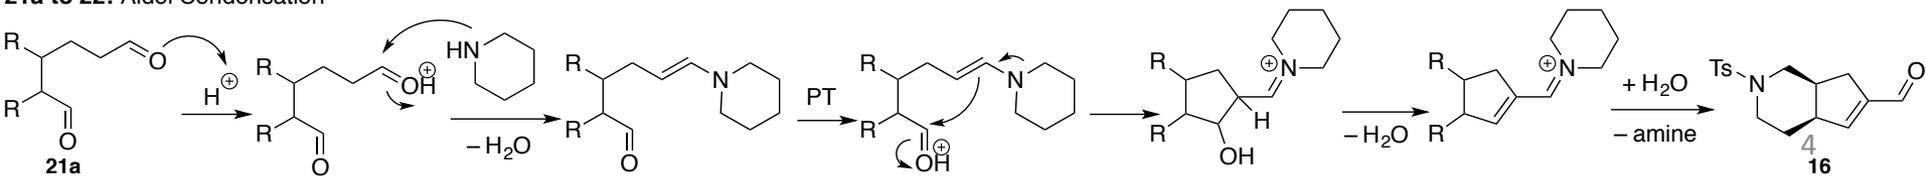

18 to 21: Mitsunobu/Diels-Alder

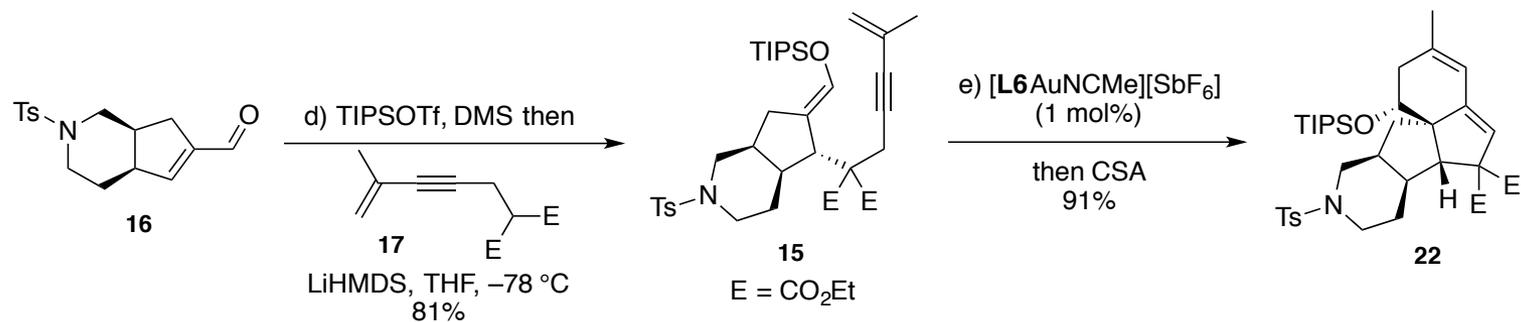

21 to 21a: Lemieux-Johnson protocol

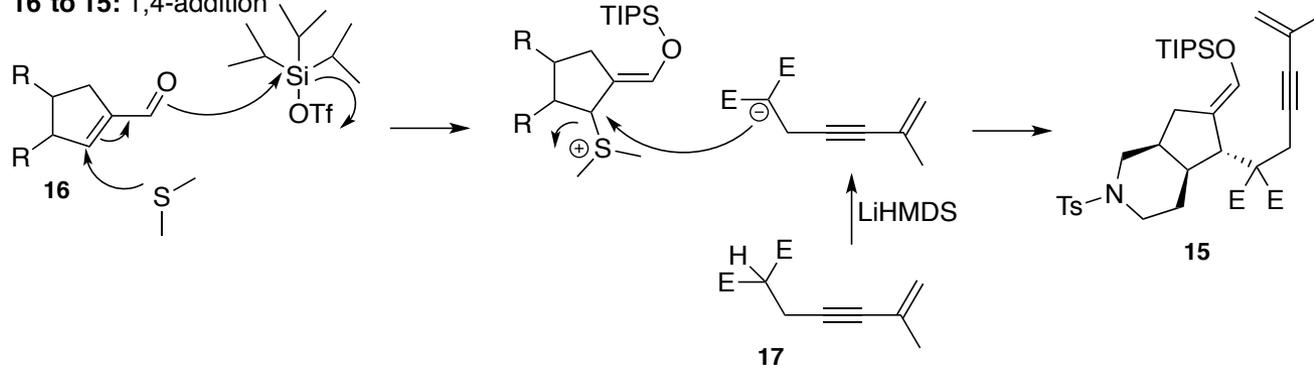

21a to 22: Aldol Condensation

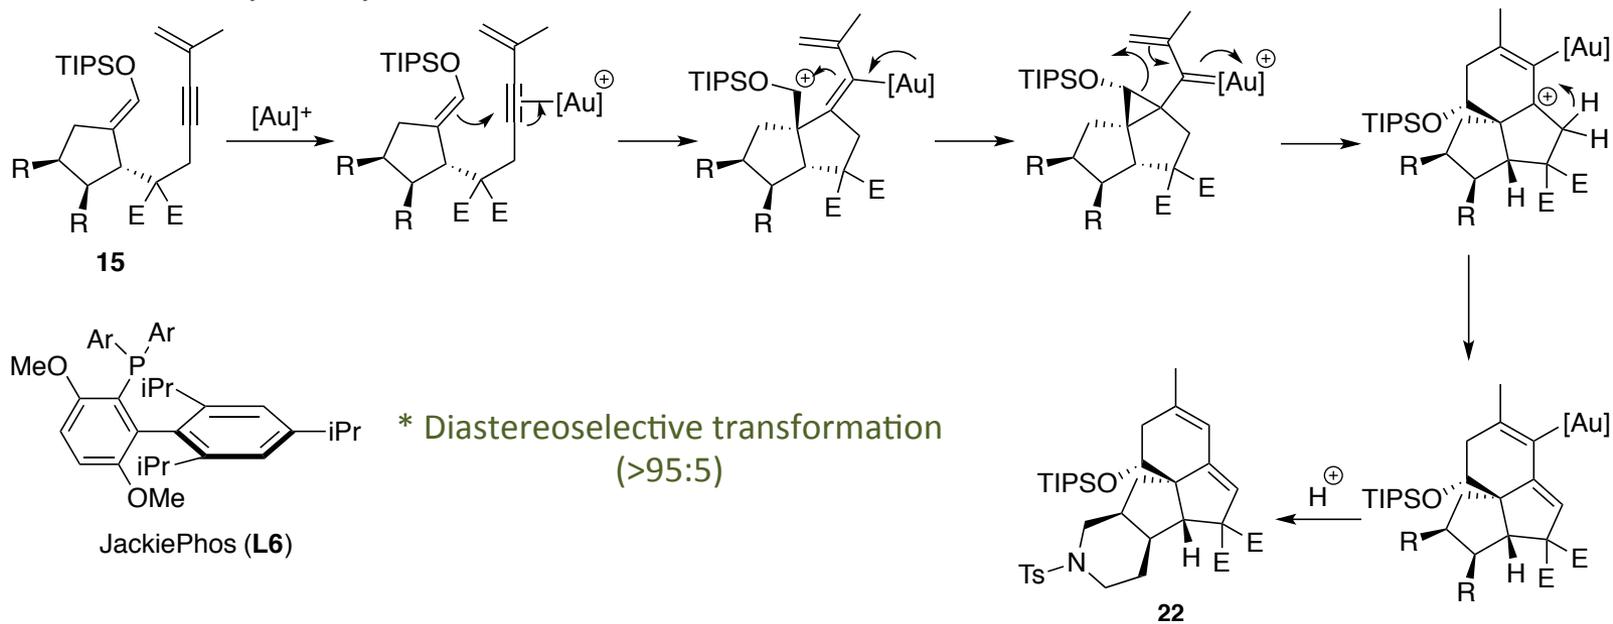

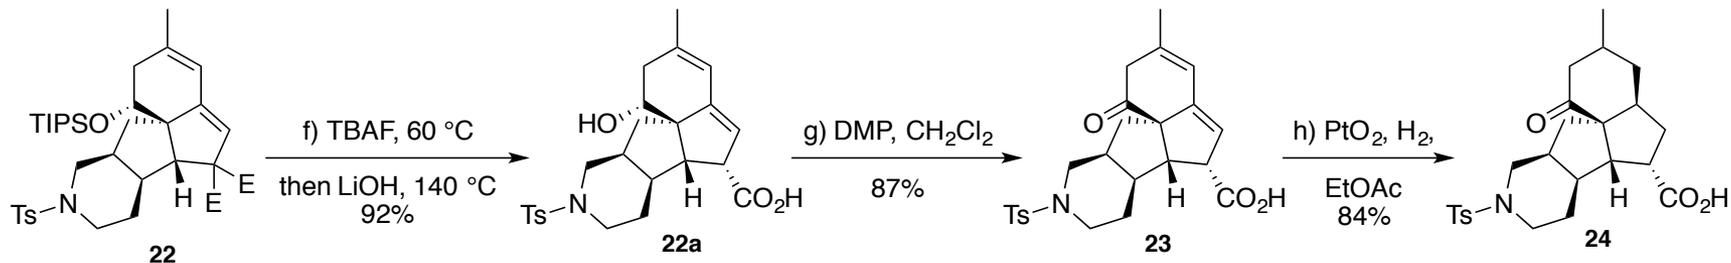

16 to 15: 1,4-addition

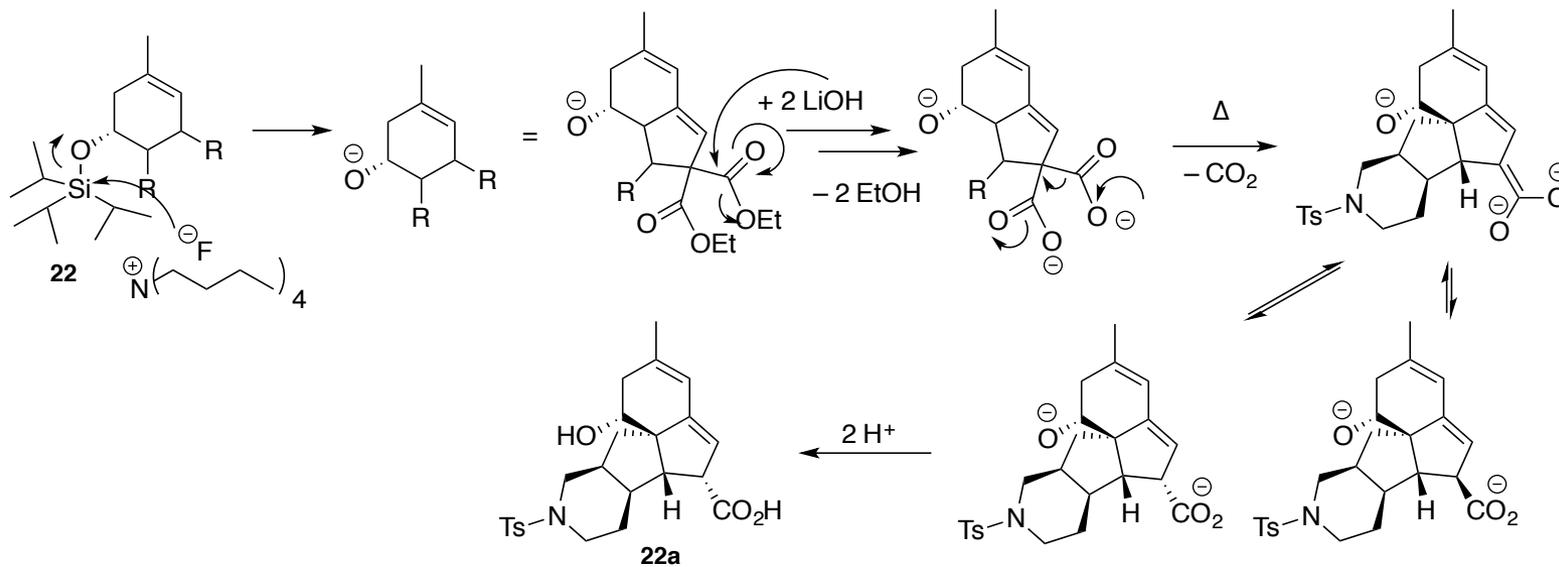

15 to 22: Gold-catalyzed Dehydro-Diels Alder

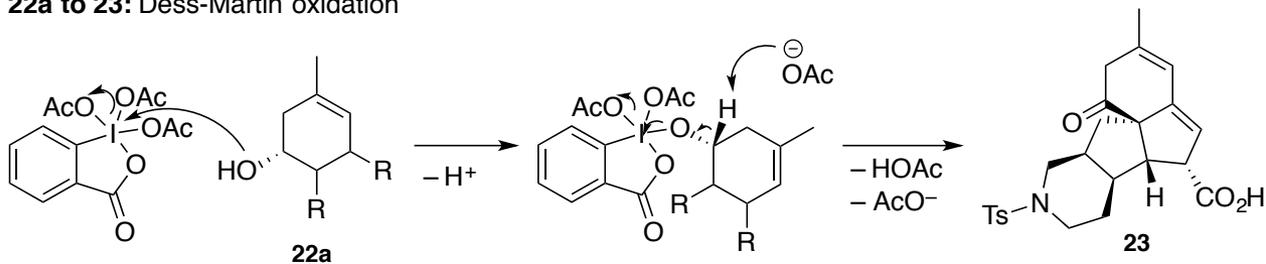

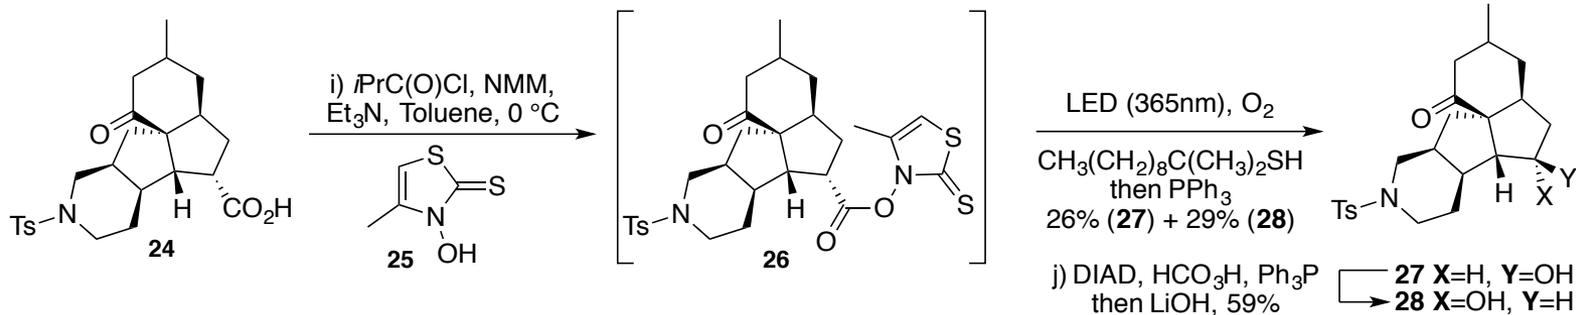

22 to 22a: One-pot desilylation/saponification/decarboxylation

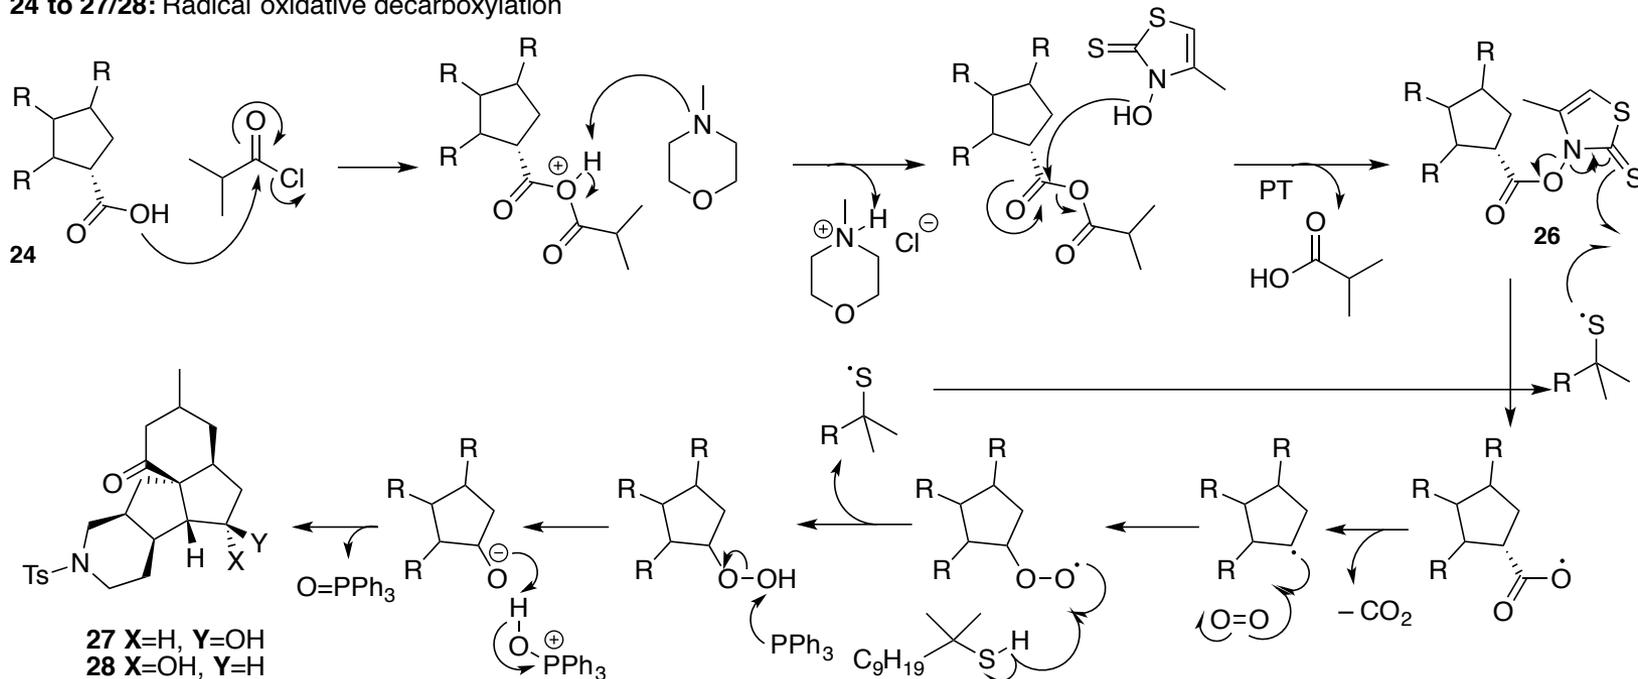

22a to 23: Dess-Martin oxidation

24 to 27/28: Radical oxidative decarboxylation

27 to 28: Mitsunobu reaction
