The Biogenesis Hypothesis/Retrosynthetic Analysis

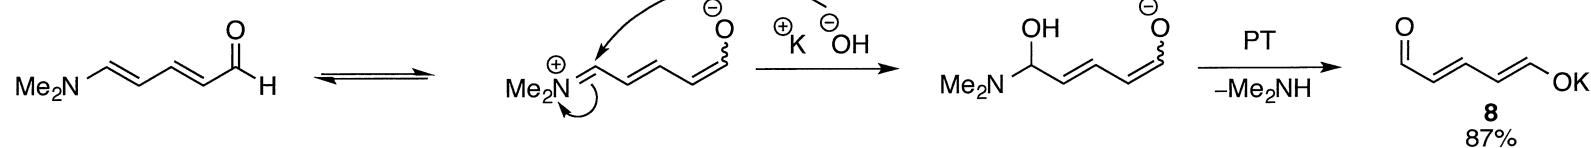

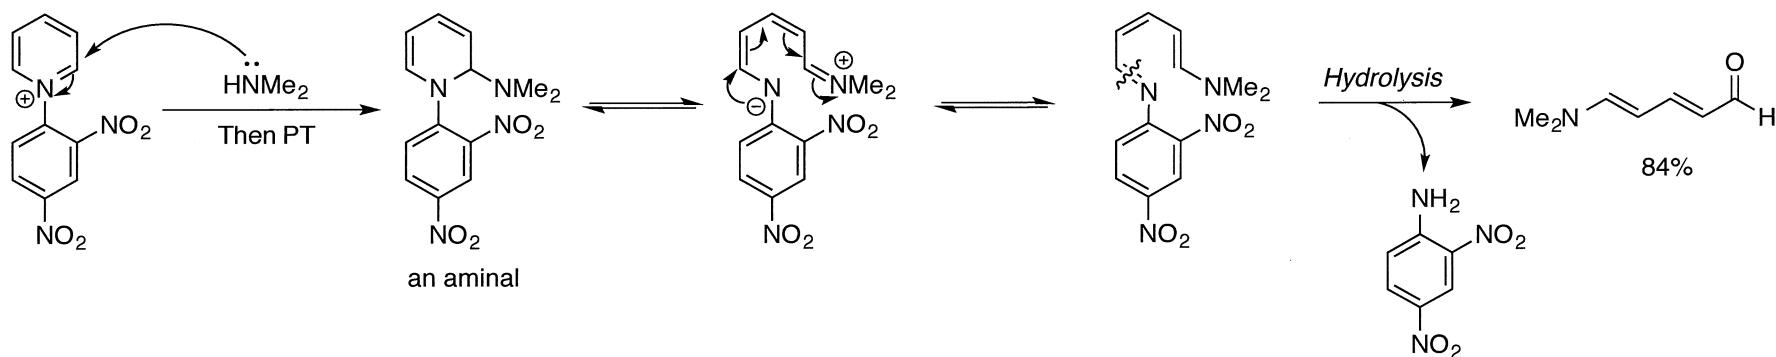

Is this proposed biosynthesis reasonable?

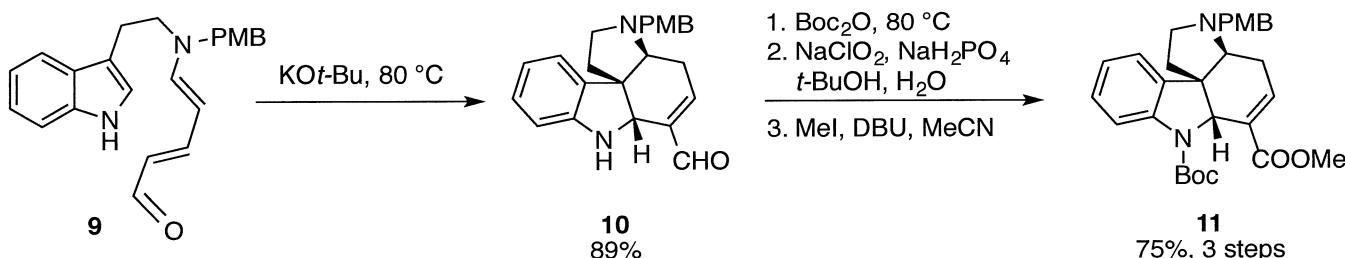

Need lots of akuammicine 5 for study!

Forward Synthesis

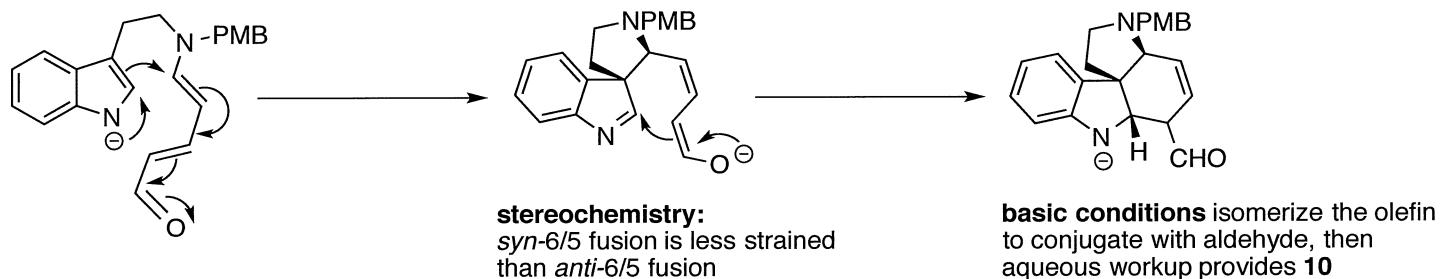

Preparation of compound 8: Zincke Reaction

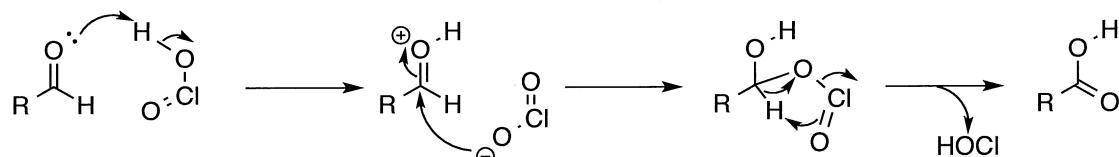

Anionic Cyclizations: in the style of Markó (9 to 10)

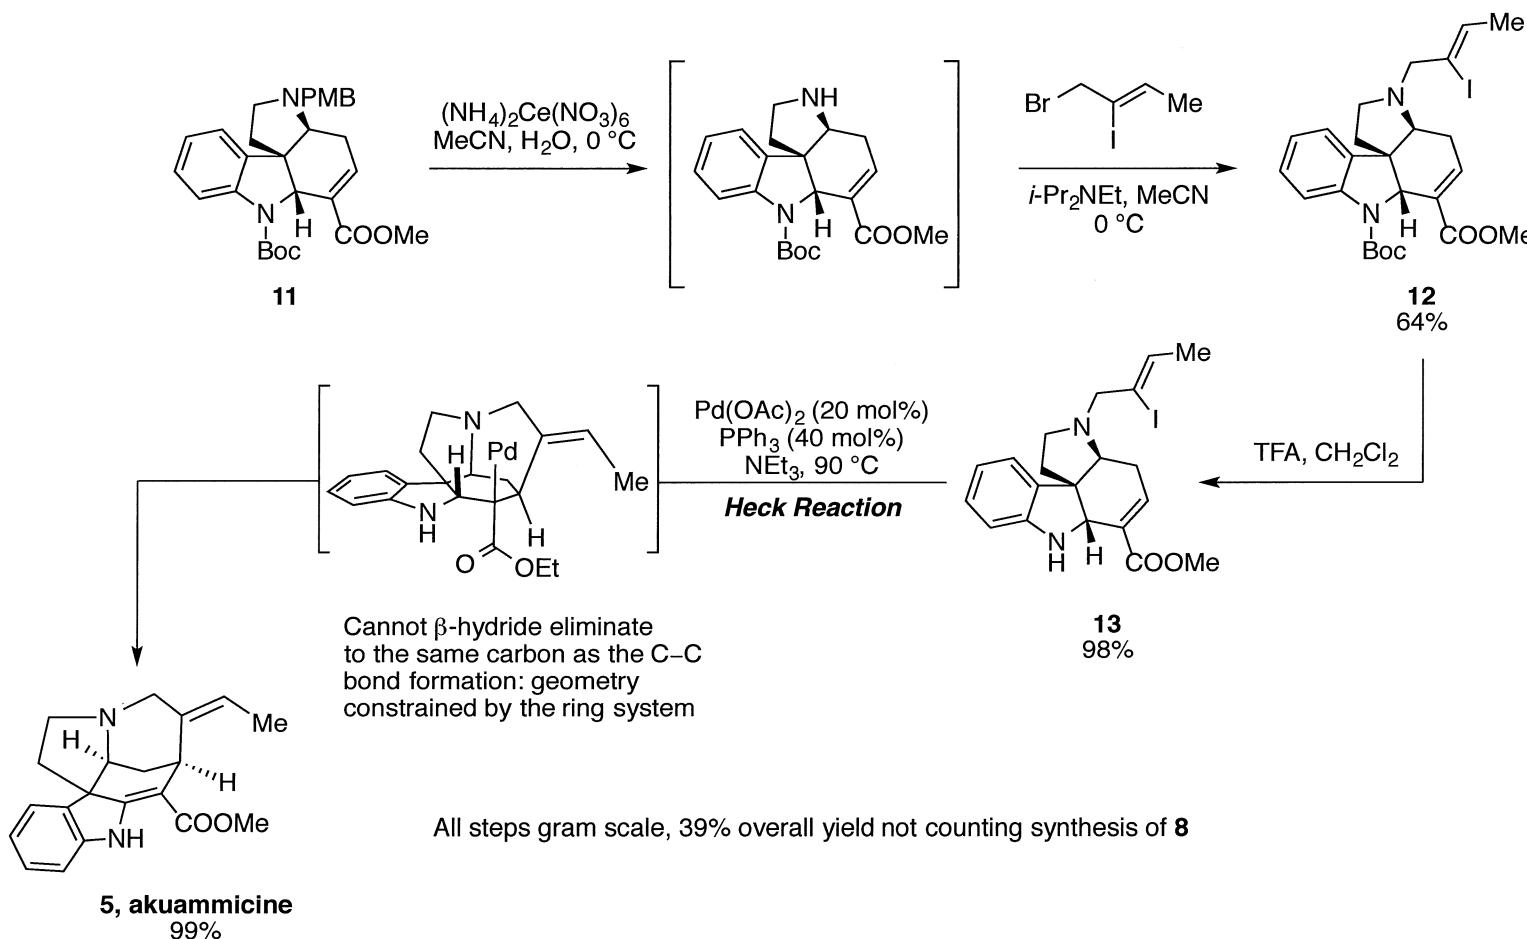

Turet, L.; Marko, I. E.; Tinant, B.; Declercq, J. P.; Touillaux, R. *Tetrahedron Lett.* **2002**, *43*, 6591–6595.
Martin, D. B. C.; Vanderwal, C. D. *J. Am. Chem. Soc.* **2009**, *131*, 3472–3473.

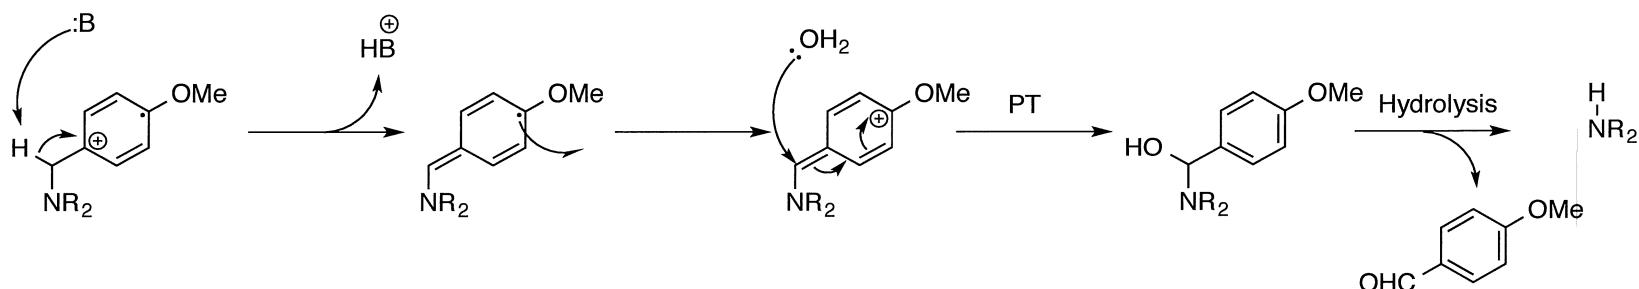

Pinnick Oxidation (10 to 11)

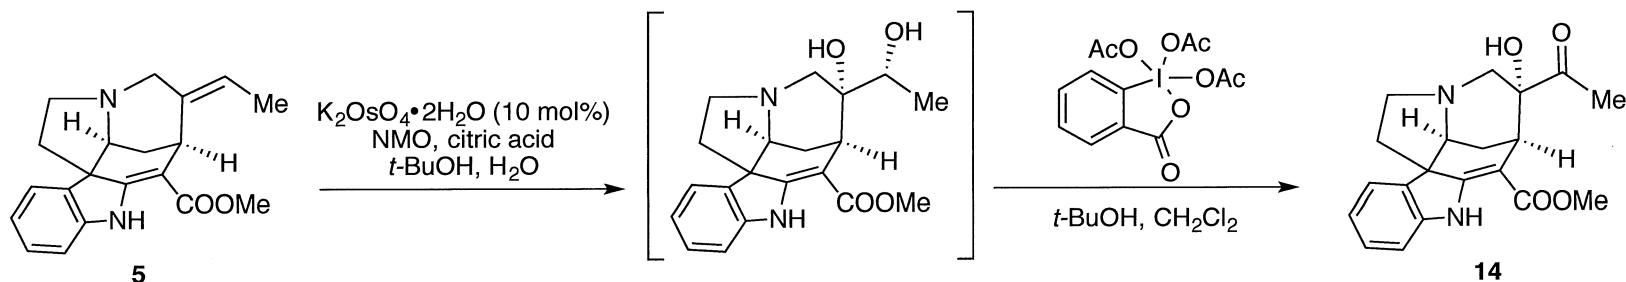

In the present case, sodium phosphate monobasic acts both as a proton source to initiate the reaction and a proton sink for the acidic byproduct.

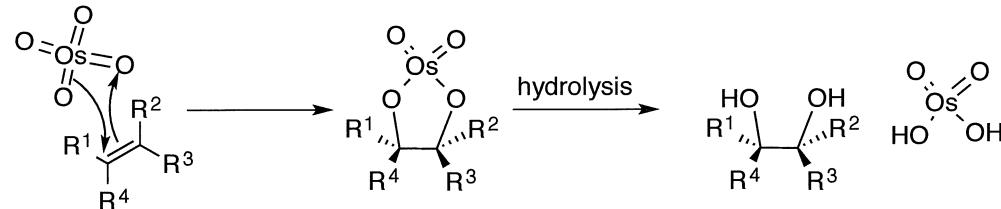

Oxidative Cleavage of PMB protecting group (11 to 12)

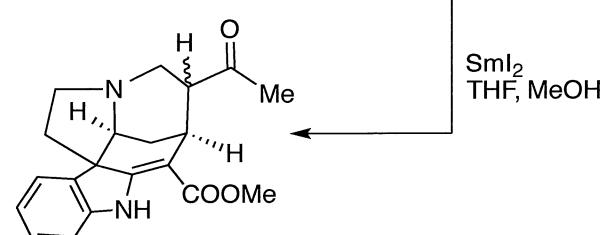

Stereochemistry is substrate-controlled

Dihydroxylation Reaction (5 to 14)

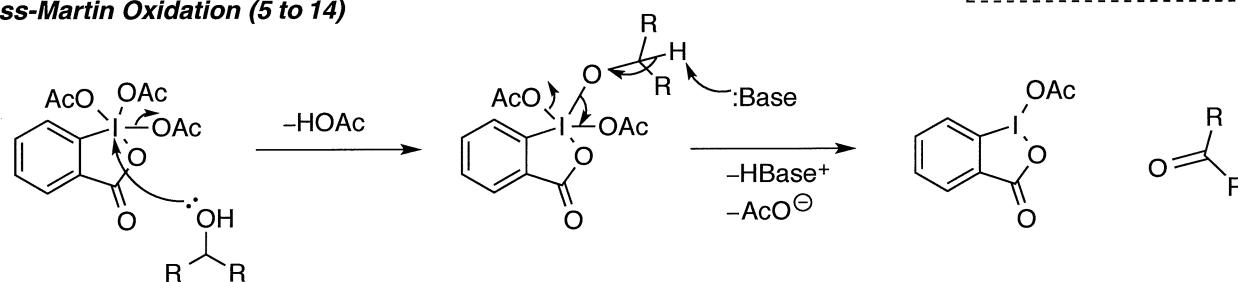

Osmium is re-oxidized by *N*-methylmorpholine-*N*-oxide
Citric acid is a ligand for osmium, which accelerates the reaction

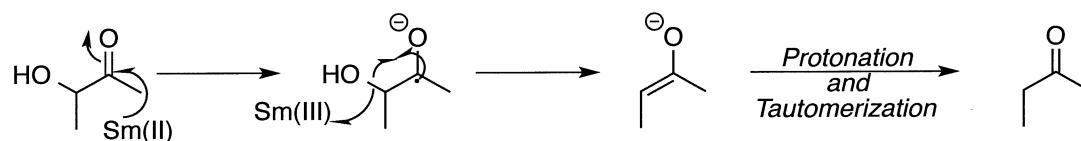

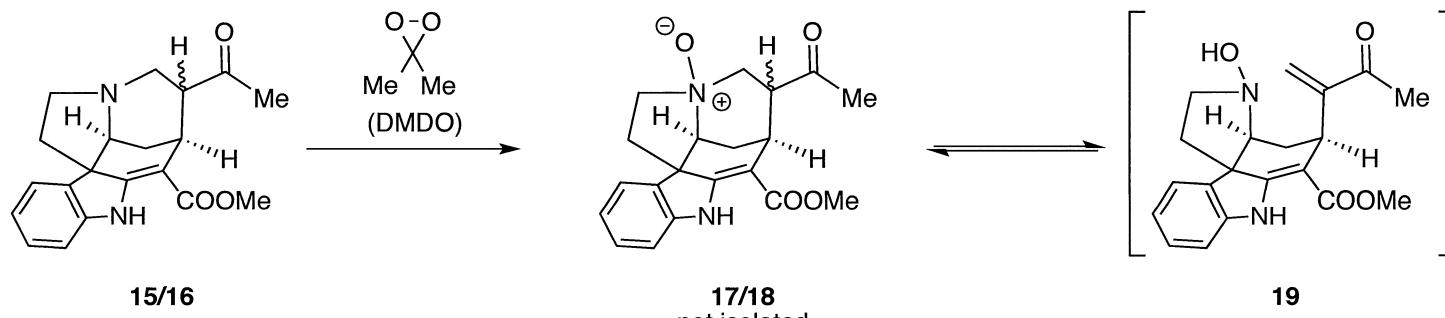

15/16
94% when isolated

Dess-Martin Oxidation (5 to 14)

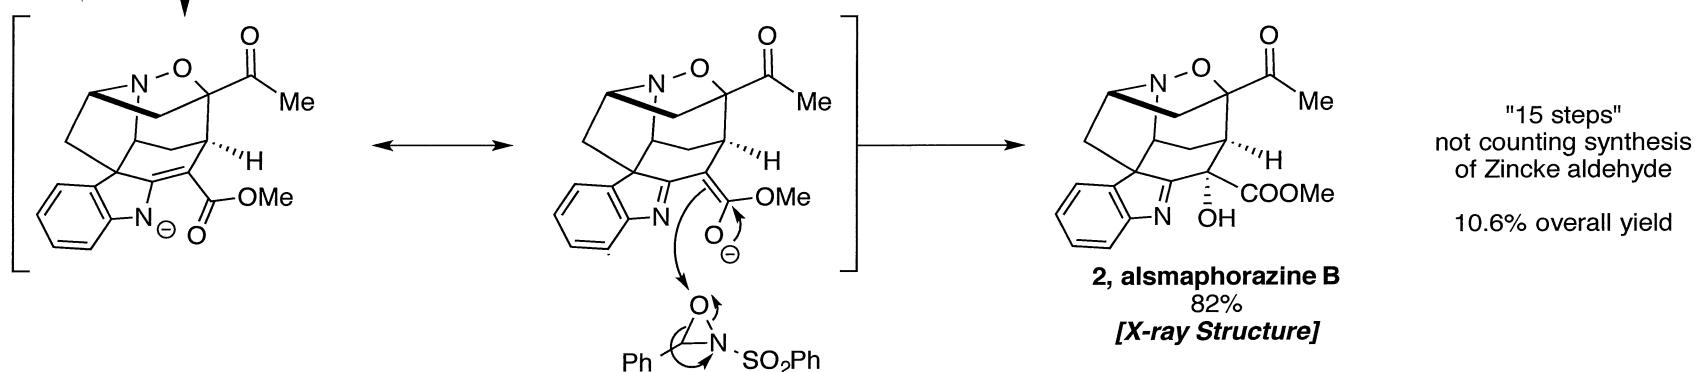

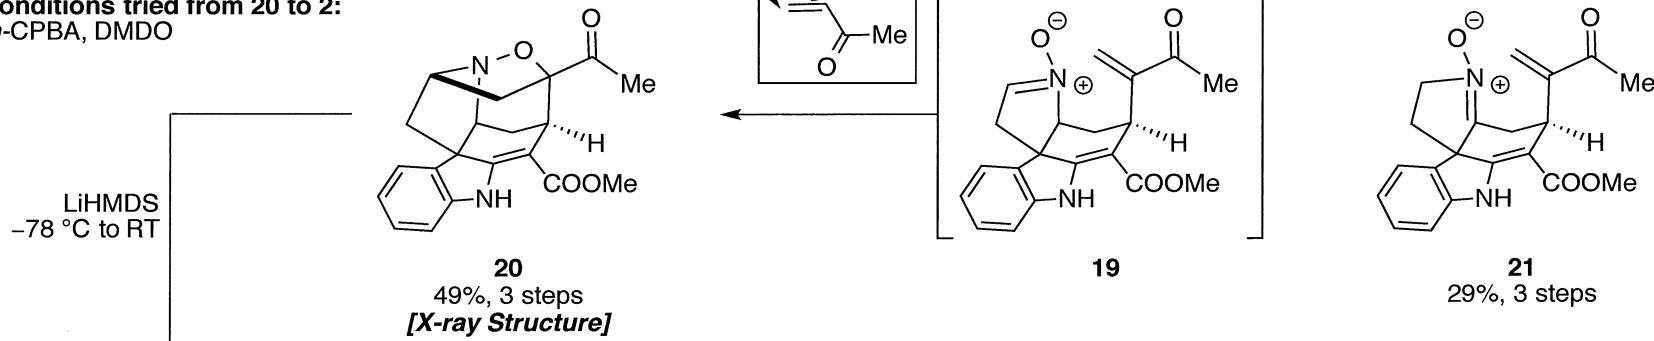

Reduction with samarium diiodide (14 to 15/16)

Conditions tried from 20 to 2:
m-CPBA, DMDO

Heck Reaction (13 to 5)

Classic Heck Reaction
